

**IN THE UNITED STATES PATENT AND TRADEMARK OFFICE**

Division of Serial No. 09/189,483

Applicant : Motoki KATO

Filed : Herewith

For : DECODING METHOD AND APPARATUS AND RECORDING  
METHOD AND APPARATUS FOR MOVING PICTURE DATA

Examiner : G. Phillippe

Art Unit : 2721

745 Fifth Avenue  
New York, New York 10151  
Tel. (212) 588-0800

**EXPRESS MAIL**

Mailing Label Number EL819160709US

Date of Deposit July 12, 2001

I hereby certify that this paper or fee is being  
deposited with the United States Postal Service  
"Express Mail Post Office to Addressee" Service  
under 37 CFR 1.10 on the date indicated above and  
is addressed to the Assistant Commissioner for  
Patents, Washington, D.C. 20231.

Charles Jackson  
(Typed or printed name of person  
mailing paper or fee)

Charles Jackson  
(Signature of person mailing paper or fee)

**PRELIMINARY AMENDMENT**

Assistant Commissioner for Patents  
Box Patent Application  
Washington, D.C. 20231

Sir:

Before the issuance of the first Official Action,  
please amend the above-identified application as follows:

**IN THE SPECIFICATION:**

Please add the following as the first paragraph on page  
1 of the specification:

--This is a divisional of U.S. application Serial No.  
09/189,483, filed November 10, 1998.--

IN THE CLAIMS:

Please cancel claims 1-52.

Please add the following claims.

53. A recording apparatus for recording moving picture data, comprising:

encoding means for encoding moving picture data using a predictive encoding system;

designation information supplying means for supplying information designating a decoding starting picture and a display starting picture in said moving picture data, and for supplying information designating a decoding terminating picture and a display terminating picture in said moving picture data; and

recording means for recording moving picture data encoded by said encoding means and the designating information supplied by said designation information supplying means.

54. The recording apparatus according to claim 53, wherein said encoding means encodes as information a position of a leading data byte of said decoding starting picture in an encoding data file of moving pictures, said position information being used in a reproducing unit of the moving picture data.

55. The recording apparatus according to claim 53, wherein said encoding means encodes as information a display start time point of the display starting picture, said display

information being used in a reproducing unit of the moving picture data.

56. The recording apparatus according to claim 53, wherein said encoding means encodes as information a position of the last data byte of said decoding terminating picture to an encoding data file of moving pictures, said position information being used in a reproducing unit of the moving picture data.

57. The recording apparatus according to claim 53, wherein said encoding means encodes as information a display termination time point of the display terminating picture, said display information being used in a reproducing unit of the moving picture data.

58. The recording apparatus according to claim 53, wherein said encoding means encodes as information a display start time point of said display terminating picture, said display information being used in a reproducing unit of the moving picture data.

59. A recording method for recording moving picture data, comprising the steps of:

encoding moving picture data using a predictive encoding system;

supplying information designating a decoding starting picture and a display starting picture in said moving picture data, and for supplying information designating a decoding

terminating picture and a display terminating picture in said moving picture data; and

recording encoded moving picture data and the supplied designating information.

60. The recording method according to claim 59, further comprising the step of:

encoding as information a position of a leading data byte of said decoding starting picture in an encoding data file of moving pictures, said position information being used in a reproducing unit of the moving picture data.

61. The recording method according to claim 59, further comprising the step of:

encoding as information a display start time point of the display starting picture, said display information being used in a reproducing unit of the moving picture data.

62. The recording method according to claim 59, further comprising the step of:

encoding as information a position of a last data byte of the decoding terminating picture in an encoding data file of moving pictures, said position information being used in a reproducing unit of the moving picture data.

63. The recording method according to claim 59, further comprising the step of:

encoding as information a display termination time point of the display terminating picture, said display

information being used in a reproducing unit of the moving picture data.

64. The recording method according to claim 59, further comprising the step of:

encoding as information a display start time point of the display terminating picture, said display information being used in a reproducing unit of the moving picture data.

65. A recording medium on which there are recorded information designating a decoding starting picture and a display starting picture in moving picture data, and information designating a decoding terminating picture and a display terminating picture in said moving picture data along with encoded data of moving pictures encoded using a predictive encoding system.

66. The recording medium according to claim 65, wherein a position of a leading data byte of the decoding starting picture in an encoding data file of moving pictures is recorded thereon and is used in a reproducing unit of the moving picture data.

67. The recording medium according to claim 65, wherein a display start time point of the display starting picture is recorded thereon and is used in a reproducing unit of the moving picture data.

68. The recording medium according to claim 65, wherein a position of the last data byte of the decoding

terminating picture in an encoding data file of moving pictures is recorded thereon and is used in a reproducing unit of the moving picture data.

69. The recording medium according to claim 65, wherein a display termination time point of the display terminating picture is recorded thereon and is used in a reproducing unit of the moving picture data.

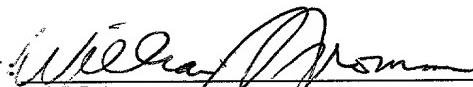

70. The recording medium according to claim 65, wherein a display start time point of the display terminating picture is recorded thereon and is used in a reproducing unit of the moving picture data.

REMARKS

This preliminary amendment makes reference to the parent application and cancels those claims that are being prosecuted in the parent. Claims 53-70, corresponding to the non-elected claims of Group II in the parent application, are presented in this divisional. Entry of the above amendatory matter and early examination on the merits are respectfully requested.

Respectfully submitted,

FROMMER LAWRENCE & HAUG LLP  
Attorneys for Applicant
